APPLICATION RATES		
Situation	Rate	Comments
SOIL SURFACTANT Application to growing medium in golf greens, tees & surrounds, bowling greens, tennis courts, finely cut fairways and sportsfields and other turf surfaces	300-1000kg/ha (3-10kg per 100m ²)	Spread uniformly over the turf surface. Apply to dry foliage and water soon after application with a minimum of 5mm of irrigation. Watering before mowing will prevent particle pick up from occurring. The higher the rate of application the higher the level of surfactant output and longevity. The ideal rate of 1,000kg/ha (10kg/100m ²) is beneficial for use during renovation activities. The rate for topical maintenance applications is between 300-500kg/ha (3-5kg/100m ²).
SODIUM DISPLACEMENT From growing medium in golf greens, tees & surrounds, bowling greens, tennis courts, finely cut fairways and sportsfields and other turf surfaces	500-1000kg/ha (5-10kg per 100m ²)	Spread uniformly over the turf surface. Apply to dry foliage and water soon after application with a minimum of 5mm of irrigation. Watering before mowing will prevent particle pick up from occurring. The higher the rate of application the higher the level of gypsum output, and sodium removal.
